

I took possession of the 78,000mAh 'Atom' Power Pack at the end of August this year, ahead of a French Carp Fishing trip.

The PowaPacs Atom unit is described on the web site as;

A lightweight, powerful, silent, fumeless, smart solar generator. With the option of a solar panel it can utilise clean, green energy from the sun to recharge its lithium battery. ATOM is easy to pack and light to carry, so your electronic equipment can always travel with you on every adventure. ATOM quickly recharges from a mains supply in approximately 4/6 hours or from the sun in approximately 8/11 hours using the 60w solar panel.

It then goes on to describe the features and attributes of both the 60,000mAh and 78,000mAh units.

However, this is not an advert for the unit but is my honest review after using the unit for eight days while on a Fishing trip at the beginning of September 2019. I would add that I purchased the unit direct from the company and this was not given to me specifically to review and I have no links or affiliation to the company.
